Title: Stellar Logic
Platform: Android
Price: Free
Release date: Coming soon to Google Play
Google Play: Coming soon to Google Play

About the game
Stellar Logic is a pure-logic star puzzle. Place one star in every row, every column and every colored region. Stars can never touch, not even diagonally. Every board has exactly one solution that can be reached by logic, so you never need to guess.

Every board is 6x6. Daily is the same puzzle all day and starts clean. Play is a random 6x6. Continue resumes a saved board. Next board is the next 6x6 in order. Tap places an X, drag adds or erases Xs, double-tap places a star. A wrong star is one mistake and stays a red X until Reset or finish. A timer tracks each solve. There is no score, and the best time is not shown.

The game plays fully offline and needs no account. The current version does not use the internet, does not show ads, and does not collect or share personal information. Progress is saved only on the device.
